

JACK ALLOUSSI

Software Engineer | TypeScript · NestJS · PHP/Laravel · React · React Native

Amman, Jordan | +962 77 809 6919 | jackalloussi23@gmail.com
jackalloussi.online | github.com/jacklusi | linkedin.com/in/jackalloussi

PROFESSIONAL SUMMARY

Software engineer with two years of full-time production experience building backend, web, and mobile systems for international clients. Experience includes a multi-category delivery platform, a system with databases of 6–30 million records, and a 20+ year legacy platform. Main stack: TypeScript/NestJS, PHP/Laravel, React/Next.js, React Native, PostgreSQL, Redis, Docker. Independently designed and built a multi-tenant inventory API to prove it stays correct under concurrent use: optimistic and pessimistic locking, idempotency, and row-level tenant isolation, backed by a full automated test suite and CI/CD pipeline. Completing a BSc in Software Engineering in October 2026. Looking for a backend or full stack role in Germany, the Netherlands, or elsewhere in the EU. Eligible for the EU Blue Card and available to relocate.

CORE SKILLS

Languages: TypeScript, JavaScript, PHP, SQL, C#

Backend: Node.js, NestJS, Express.js, Laravel (9–12), REST API design, TypeORM

Frontend: React, Next.js, Tailwind CSS

Mobile: React Native (CLI and Expo), Apple App Store and Google Play Store deployment

Data: PostgreSQL, MySQL, Redis

DevOps and Cloud: Docker, GitHub Actions CI/CD, Terraform, Amazon Web Services (AWS), Oracle Cloud Infrastructure, Caddy

Architecture and Testing: Clean Architecture, Domain-Driven Design, SOLID, Testcontainers, Jest, k6

Practices: Agile, Scrum, Jira, Bitbucket, Git, GitHub, Code Review

Spoken languages: Arabic (native), English (professional working proficiency; IELTS General Training scheduled Q4 2026)

PROFESSIONAL EXPERIENCE

Software Engineer | CSC Beyond, Amman, Jordan | 09/2024 – Present

Full-time. Delivers production software for international clients across e-commerce, logistics, and enterprise systems. Client engagements are covered by NDA and described here in generalised terms, consistent with the confidentiality note in the published case study at jackalloussi.online/projects/us-client-platform.

- Maintain and extend a production platform with database tables spanning 6–30 million records, working across staging, development, and a dedicated replica database used for live monitoring. Improved access permissions and resolved several security-related defects.
- Collaborate within a distributed engineering team using Jira for sprint tracking and Bitbucket for version control, following a feature-branch and pull-request workflow, with daily status reporting and direct client communication.
- Built and shipped features across separate driver-facing and customer-facing React Native applications for a multi-category delivery platform (restaurant, grocery, and retail), both published to the Apple App Store and Google Play Store.
- Implemented zone-based data retrieval driven by an internal admin dashboard, and designed a customer support and ticketing system with full order-flow state control.
- Integrated Stripe for end-to-end payment processing across the platform.
- Contributed to a 20+ year legacy system serving 1–2 million records: six months diagnosing and resolving client-reported defects through a local → staging → QA → production release pipeline.

Junior Full Stack Developer | CSC Beyond, Amman, Jordan | 05/2023 – 07/2023

- Developed backend features in PHP and Laravel for client web applications.
- Built internal tooling and e-commerce integrations using Retool and Shopify.

Web Development Intern | AI Quintessential, Amman, Jordan | 03/2023 – 05/2023

- Built and maintained WordPress websites; contributed to UI/UX workflows using Framer.

SELECTED PROJECTS

Full portfolio of 12 engineering case studies at jackalloussi.online/projects

Stockwell — Multi-tenant inventory & warehouse API — NestJS, TypeScript, PostgreSQL, Redis, Docker

Live: stockwell.siqva.com/api/docs · Code: github.com/jacklusi/stockwell

- Built to prove correctness under concurrency rather than assert it: 50 parallel stock adjustments resolve to exactly one winner and 49 explicit 409 conflicts, captured as a JSON artefact on every CI run.

- Clean Architecture across 4 bounded contexts. Optimistic locking by default, with ordered pessimistic row locks for two-row transfers, and idempotency keys committed inside the same transaction as the mutation they guard.
- Tenant isolation defended in four layers, ending in PostgreSQL row-level security. Cross-tenant access returns 404 everywhere, verified end to end.
- Three-tier automated test suite: unit, Testcontainers integration, and end-to-end, plus a k6 smoke test. CI runs lint, typecheck, dependency-boundary checks, and a production dependency audit. 8 Architecture Decision Records.
- Live in production via Docker Compose on Oracle Cloud, behind Caddy. AWS/Terraform topology is defined and validated in CI as a documented next step.

USNS Backend — University notification API — PHP 8, Laravel 12, MySQL

Live: usns.siqva.com · Code: github.com/jacklusy/USNS

- 165 routes across 23 modules serving two client contracts from one codebase, with publishing authority enforced by role hierarchy and audit logging that cannot be bypassed.
- Self-hosted on a single Oracle Cloud instance behind Caddy.

USNS Administration Dashboard — Next.js 16, React, TypeScript

Live: usns.siqva.com · Code: github.com/jacklusy/usns-next

- 44 authenticated routes across 9 feature areas for university leadership, built mock-first behind a lint-enforced seam and switched to the live API module by module without a big-bang rewrite.

EDUCATION

BSc Software Engineering | Al-Zaytoonah University of Jordan, Amman | 10/2021 – 10/2026 (*expected*)

Studies paused during 2022–2023 to complete the Orange Coding Academy full-stack programme.

Full Stack Development Programme | Orange Coding Academy, Amman, Jordan | 10/2022 – 10/2023

- Seven-month intensive programme in JavaScript, PHP, Laravel, React, and Redux, followed by a one-month industry internship.

CERTIFICATIONS

- AWS Certified Developer – Associate (DVA-C02) — Amazon Web Services — in progress, exam scheduled later in 2026
- IELTS General Training — in progress, exam scheduled October/November 2026
- Backend Development: .NET, Clean Architecture, Domain-Driven Design, SOLID — Sky Software, 04/2025
- Front-End Development: Angular and TypeScript — Sky Software, 11/2024
- GitHub Foundations — GitHub / Microsoft

WORK AUTHORISATION

Jordanian national. Seeking a backend or full stack engineering role in Germany, the Netherlands, or elsewhere in the EU. Eligible for the EU Blue Card (Germany, §18g, recognised degree, recent-graduate salary threshold applies October 2026 to October 2029) and for Dutch Highly Skilled Migrant sponsorship at the under-30 salary threshold. Anabin degree-recognition record: institution status H+, degree type rated “Entspricht.” Available to relocate. Current role requires one month’s notice.
